Meeting the expectations of the Visually challenged, CABVI chooses NITA Inc.

Montreal, Canada - Nita Inc. Graphic Arts Equipment along with its US distributor and partner (Enovation graphic systems) have allowed technology to make life a little easier for visually challenged workers in New York.

The **CABVI (Central Association for the Blind and Visually Impaired)** turned to NITA after a lengthy search for a manufacturer who would listen and respond to their needs. The idea was to provide a pneumatically operated punching device that would be extremely safe allowing a visually blind operator to precisely punch holes in a clam shell packaging once the product was inside the package.

“CABVI is a non profit blind agency that employs blind and visually impaired people. We manufacture products for New York State and the federal Government”, explains Business Development Manager, Dennis Webster.

“When Dennis approached us with the idea of making his workers more productive and more automated with less risk of self harm, we were not only up to the task, we were honored. It was also extremely important for us not to fully automate the process, keeping in mind that these people have disabilities and work at these types of jobs for a living. We wanted to make their life easier not remove their livelihood!”, says Claudio Napoleoni, NITA Marketing Director.

The challenge was to build a punch that would allow for several formats of clam shells or blister packaged Smith & Wesson flashlights. Some flashlights have battery cells that are included in the package and some do not so the point of gravity shifts from one unit to the other when hung on the store hooks, also the formats vary in multiple lengths. The idea was to enable the operator to get rid of his manually held “traditional, paper hole puncher” which was very strenuous on the operators hands, forearms and shoulders.

“The criterias were very specific. The punch had to be simple to operate, have a quick set up for format changes, had to be effective and deliver constant results. Not only did Nita deliver such a unit they made it attractive too! We are very pleased to have worked with NITA, they made the experience very easy, they are extremely comprehensive people with great solutions that met all our requirements, we would recommend them to any other organization such as NIB and NISH for their requirements”, adds Mr. Webster

ABOUT

Nita Inc.....is the leader in prepress automation through a series of conveyor solutions, shears, inline punches and/or benders for all litho plates.

Established in Lachenaie, Quebec, Canada since 1990, Nita Inc. Graphic Arts Equipment is a manufacturing company which offers research and development services to accommodate the specific requirements of its customers.
